

**SLOPE FENCE**

**NEW!**

**Fence Description**

**Festening type "I"**

Panel fence on the base of **SLOPE** type welded mats. It consists of **FORTE** system. A **SLOPE** type fence consists of welded mats (spans) and posts made of steel cold bent closed sections. The posts are set every 2480 mm. From the standard version they differ in shape sloping finial of the upper part. The posts can be ended with

spot footing attached with screws to the pedestal (foundation). The posts that are to be settled in the point foundation are lengthened to minimum 600 mm. The panels are screwed to the posts with rust-proof screws and pressed down with a concealing strip. From the top the posts are ended with plastic or metal covers.

## TECHNICAL DATA

### Measurements

Type of fence	Height of the element [mm]	Post section [mm]	Height of the post [mm]	Weight of the mat [kg]
SLOPE80	800	60x40x2	1400	12.9
SLOPE100	1000	60x40x2	1600	15.8
SLOPE120	1200	60x40x2	1800	18.8
SLOPE140	1400	60x40x2	2000	21.7
SLOPE160	1600	60x40x2	2200	24.7
SLOPE180	1800	60x40x2	2400	27.7
SLOPE200	2000	60x40x2	2600	30.6
SLOPE220	2200	60x40x2	2800	33.6
SLOPE240	2400	60x40x2	3000	36.6

### Variants of Realization

#### REALIZATION:

- posts settled in the foundation,
- posts fastened to the base,
- gradation.

#### OPTIONS:

- one peak per span,
- two asymmetrical peaks (1,5:1),
- two symmetrical peaks,
- symmetry with an additional peak,
- prefabricated concrete pedestal.
